

Case Study

Fortress Interlocks

Industry: control safety systems

Website: www.fortressinterlocks.com

Number of employees: 100

Executive Summary

Overview

FORTRESS INTERLOCKS

The Global Supplier of Total Access and Control Safety Systems

Fortress helps customers protect their human and capital assets. We create safe workplaces where employees are safeguarded from injury and plant is protected from damage. We are world leaders in access control systems, and our products guarantee that actions and events are undertaken in a pre-determined sequence ensuring a safe working environment.

The Challenge

With the in-flux of mobile devices the corporate Wi-Fi was struggling to keep up with demand using the old 54 Mbps standard.

“New Smart Phones can operate using the new 802.11ac at Gigabyte speeds and we needed to get up to date.”

Solution

IP Works recommended the use of a Meraki 802.11ac Access Point. Not only do they look beautiful, they are fully featured and allow us to redirect guest user traffic to the fortress website as users initially connect.

Business Results

Now Fortress staff can operate seamlessly throughout the office at wired speeds.

Productivity is increased due to the speed increases and customers are able to connect to use guest Wi-Fi.

Key Benefits:

- ❖ Latest 802.11ac Wi-Fi operating at wired speeds
- ❖ Fixed Price managed service – no bill shock

Next Steps

Now that MERAKI WI-FI has been deployed, the work won't stop.

FORTRESS INTERLOCKS continues to work with IPWORKS Systems Engineers to explore new ways of innovation for the growing number of happy employees and customers
